Laboratory & Consulting Services

February 7, 2002

Mr. Bruce Morrison
United States Environmental Protection Agency
901 North 5th Street
Kansas City, Kansas 66101

Dear Bruce,

Please find, enclosed, a bound volume containing the publications that you requested.

A federal contracting officer and consultant recommended that we also provide the following reference to our work with another agency:

Mr. Kevin Santee, CIH
Safety and Environmental Team Leader, Region 6
General Services Administration
(6PMFM)
1500 E. Bannister Rd.
Kansas City, MO 64131-3088
816-823-2219

40325998
Superfund

Mr. Santee has given his approval for our reference to him.

We truly appreciate your time and efforts on our behalf. If you have any questions or if we can be of any further assistance, please contact us at your convenience. I will call, shortly, to confirm your receipt of this package.

RECEIVED
FEB 12 2002
SUPERFUND DIVISION

Thank you,

Dave Siegel
Sales Director

has fulfilled the requirements of the AIHA Laboratory Quality Assurance Program (LQAP) and therefore conforms to the ISO/IEC 17025 international standard, and is formally recognized by AIHA as being technically competent to perform the analyses listed in the following

SCOPE OF ACCREDITATION

INDUSTRIAL HYGIENE Originally Accredited: 04/15/99		ENVIRONMENTAL LEAD Originally Accredited: 02/01/02		ENVIRONMENTAL MICROBIOLOGY
_X_ Metals	___ Silica	_X_ Paint Chips	___ Air	___ Bacteria
_X_ Asbestos PCM	___ Asbestos PLM	_X_ Dust Wipes	_X_ Soil	___ Fungi
_X_ Organic Solvents	_X_ Diffusive Samples			

The above named laboratory agrees to perform all analyses listed above in the scope of accreditation according to applicable policy requirements and acknowledges that continued accreditation is dependent on successful participation in the appropriate proficiency testing programs. This laboratory may be contacted to verify the current scope of accreditation, proficiency testing performance and accreditation status. Accreditation by AIHA is not a guarantee of the validity of the data generated by the laboratory.

Laboratory #102959
Certificate # 598

IHLAP Accreditation Expires: 04/01/04
ELLAP Accreditation Expires: 02/01/05

The Industrial Hygiene Laboratory Accreditation Program (IHLAP)

The Industrial Hygiene Laboratory Accreditation Program is designed specifically for laboratories involved in analyzing samples to evaluate workplace exposure. Participation assists the laboratory in maintaining high quality standards.

Why participate in the Industrial Hygiene Laboratory Accreditation Program?

When a laboratory is accredited by AIHA, the laboratory and its clients have the assurance that the laboratory has met defined standards for performance based on examination of a variety of criteria. The AIHA IHLAP is the largest program of its kind in the world and has been in operation since 1974. When an IH laboratory is accredited by AIHA, it becomes part of an elite group of laboratories achieving and maintaining a high level of professional performance.

Who should participate in the program?

An industrial hygiene laboratory is a laboratory that analyzes samples taken in the workplace environment. Since results of these analyses are used to determine the magnitude or presence of a problem in the workplace environment, it is vital that the laboratory analyzing the samples be proficient in producing high quality data on which important health decisions will be based. Accreditation from AIHA is a mark of that capability.

What if an organization has multiple industrial hygiene laboratories?

If an organization has a number of in-house industrial hygiene laboratories based in different locations, each location will be identified as a separate entity, and each must individually comply with all accreditation requirements.

What are the criteria for accreditation?

The main program requirement areas are:

1) Personnel Qualifications

The laboratory director is the person responsible for the overall direction of the laboratory. This individual must meet specified standards and be

located on site. The director's primary responsibiltiy is the operation and administration of the laboratory. To be considered qualified, a director either must have a degree in a basic science and a minimum of five years industrial hygiene experience beyond the bachelor's level or must be certified by the American Board of Industrial Hygiene. Experience beyond the bachelor's level may be a combination of academic and work experience.

The laboratory supervisor is the person supervising the day-to-day operations of the laboratory. To be qualified, a supervisor either must have a degree in a basic science and a minimum of five years experience in industrial hygiene chemistry, or related procedures, or must be certified in the chemical practices of industrial hygiene by the Amercian Board of Industrial Hygiene. A minimum of two and one-half years of the experience must be in industrial hygiene chemistry, with the remaining years of experience in other chemical analytical procedures.

It is possible for a single person to serve as both laboratory director and supervisor providing the qualifications and responsibilities of both roles are satisfied.

The laboratory must have a quality control coordinator who has a minimum of a bachelor's degree in the basic sciences and have documented education in statistics and quality control procedures. The quality control coordinator should be independent of the analysts and be capable of effectively administering a quality control program.

All laboratory analysts must be qualified by education and/or experience to produce reliable analytical results.

2) Participation in PAT Program

When a laboratory enters the AIHA IH Laboratory Accreditation Program, it is required to participate in the AIHA Proficiency Analytical Testing (PAT) program for all categories of analytes that are part of the services provided by the laboratory

Data obtained from participation in the PAT program is available to the IH Laboratory Accreditation Committee, and the evaluation of results, insofar as it affects the accreditation of a laboratory, will be the responsibility of that committee.

3) Facilities

A laboratory must have adequate space, facilities, and equipment for the services provided.

4)Quality Control & Equipment

Routine quality control procedures must be an integral part of a laboratory's procedures and functions. A quality assurance plan (a working document itemizing the day to day implementation of the laboratory's quality assurance and quality control procedures) will be evaluated.

Quality control for laboratories performing airborne asbestos analyses must comply with the quality assurance requirements of the Asbestos Standard CFR 1910.1001, Appendix A, and NIOSH 7400 Method, current revision.

5) Laboratory Records

The laboratory must maintain proper and adequate records and files. A sample numbering and tracking system, analytical data, analytical results, report format, records of analytical data, and reporting of the quality control data will be evaluated.

6) Methods of Analysis

The methods (not procedures) used by the laboratory, including a method review program, will be evaluated to determine that accepted and documented industrial hygiene laboratory methods are used, approved by the laboratory director, made available to industrial hygiene analysts, and modified with the approval of the laboratory director.

7) Site Visits

Site visits of laboratories are conducted by trained, experienced assesors acting on behalf of AIHA. These visits will generally take place once every three years, unless additional site visits are deemed necessary by the IH Laboratory Accreditation Committee.

Bulk Asbestos and IHLAP

The Bulk Asbestos Proficiency Analytical Testing (BAPAT) program can now be incorporated into a laboratory's accreditation in the IHLAP. Two options are available for industrial hygiene laboratories:

- If the laboratory is already accredited as part of the National Institute of Standards and Technology (NIST) National Voluntary Laboratory Accreditation Program (NVLAP), no action is required.
- If a laboratory performs bulk asbestos analysis for clients and is not part of the NVLAP, then the laboratory can include this analyte as part of its IHLAP accreditation as outlined in the revised program policies.

Click here to view a flowchart that outlines the process of accreditation.

For more information on the IHLAP Program, contact the Laboratory Accreditation Department at AIHA; (703) 849-8888

To review the requirements in more detail or download the application for accreditation, click here Laboratory Quality Assurance Program Application.

LEAD

The Environmental Lead Laboratory Accreditation Program (ELLAP)

The Environmental Lead Laboratory Accreditation Program is for laboratories involved with the analysis of lead in environmental samples. The EPA estimates that somewhere between 300 and 3,000 accredited laboratories will be needed to perform analyses related to lead-based paint and matrices contaminated with lead-baesd paint. ELLAP meets the EPA requirements for recognition of laboratories as capable of analysis of paint film, soil, and/or dust wipes.

- What is the ELLAP Program?
- What is the relation between ELLAP and NLLAP?
- What are the program requirements?
- Fees and application for the program

What is the ELLAP Program?

The Environmental Lead Laboratory Accreditation Program (ELLAP) is an approved lead laboratory accreditation program under the Environmental Protection Agency's (EPA) National Lead Laboratory Accreditation Program (NLLAP).

What is the relation between ELLAP and NLLAP?

AIHA has been formally recognized as an approved lead laboratory accrediting organization by the EPA NLLAP. A memorandum of understanding with the EPA declares that all laboratories accredited by AIHA for the analysis of lead in paint chips, dust wipes, and/or soil will be recognized by the NLLAP as capable of performing acceptable lead analyses. To obtain EPA NLLAP recognition, a laboratory must also participate in the AIHA ELPAT Program.

What are the program requirements?

The ELLAP Program contains six main program area requirements:

1) Proficiency Testing

Laboratories seeking AIHA ELLAP accreditation must participate in the ELPAT program for each lead matrix analyzed by the laboratory. These proficiency samples will be of varying concentrations and as real-world as possible. Proficiency for award of accreditation allows no outliers reported in the last two consecutive rounds or 25 percent or less cumulative outliers reported in the last four rounds. Proficiency is evaluated for each matrix (i.e., paint, soil, dust wipes) and accreditation may be granted for any combination of matrices.

2) Personnel Qualification Review

The laboratory will identify those who function as technical manager, quality assurance coordinator, and analyst(s), however titled within the laboratory organization. The technical manager must have a college degree in chemistry or related science, a minimum of three years nonacademic

analytical chemistry experience, and a minimum of two years nonacademic metals analysis experience (times may run concurrently). The quality assurance coordinator must fulfill one of two equivalent criteria: 1) earned a college degree in a basic science, have one year of nonacademic analytical chemistry experience, and training in statistics; or 2) four years of nonacademic analytical chemistry experience and training in statisitics. Each analyst must provide documentation of completion of a training course in metals analysis.

3) Quality Assurance Program Review

A written quality assurance plan is required and must be submitted for review. This plan must include a statistical quality control plan and documentation that statistically-based measures for accuracy and precision of data from analysis are used. In addition, matrix-spiked samples of paint and soil will be analyzed at a frequency of one per batch or at 5 percent per sample batch, whichever is larger. Method spike/method duplicates made from blank wipe collection media are used for wipe sample quality control spike preparation. One method blank must be analyzed per sample batch or at 5 percent per sample, whichever is larger. At least one external reference standard must be analyzed with each batch. There are specific requirements for sample log-in, analysis data documentation, and reporting of results. Information on these procedures with instrument calibration and calculation and report review procedures must documented and presented as part of the application.

4) Analytical Method Documentation Review

No specific method is required for accreditation, but analyses shall be conducted using recognized methods, methods mandated by legal requirements, or methods developed and validated by the laboratory. Laboratories must have established performance criteria for analytical methods and must have documentation demonstrating that the criteria are met. Click here for a list of methods which may be acceptable.

5) Facility Review

The program accredits the laboratory facility, not an individual or an organization. A description of the facility, including a floor plan, must be submitted as part of the application. Specific instruments or types of instruments are not mandated, but information on, and identification of, all instruments used must be submitted. Instrument performance checks and documentation of maintenance activities are required elements of the ELLAP. Mobile laboratories are permitted.

6) Site Visits

A trained site visitor will perform an on-site assessment of the laboratory as a representative of AIHA prior to accreditation. This prearranged, announced visit is conducted using a checklist to ensure examination of lead analysis issues. Site visits are conducted every three years. Site visits are conducted every three years. Site visits for ELLAP may be combined with AIHA Industrial Hygiene Accreditation program site visits.

Click here to view a flowchart that outlines the process of accreditation.

For more information on the ELLAP Program, contact the Laboratory Accreditation Department at AIHA; (703) 849-8888

BROCHURE
Request a Lab Brochure

The Environmental Lead Proficiency Analytical Testing (ELPAT) Program is designed to help your laboratory assess and/or improve its analytical performance by providing it with test samples on a quarterly basis and evaluating the results. Participation in the ELPAT Program is open to all laboratories but it is mandatory for laboratories seeking accreditation by one of the recognized accrediting organizations under EPA's National Lead Laboratory Accreditation Program (NLLAP).

Matrices under the ELPAT Program include paint chips, soil, dust wipes, and air samples.

How the program works?

Once you are enrolled, your laboratory will begin to receive sample kits on a quarterly basis. Four concentration levels will be shipped for each of three matrices: paint chips, soil, and dust wipes.

Paint chip samples are obtained from lead-based paints that have lead sources representative of the compounds and interferences encountered in field samples.

Soil samples are representative of environmental contamination resulting from lead-based paint, the industrial use or disposal of lead-based compounds, or airborne lead emissions.

Dust wipe samples are prepared using field-collected dust samples. Dust wipe sample sets include a blank.

Are special analytical methods required?

The ELPAT Program does not specify a particular analytical method to be used. Your laboratory must use the same procedure when analyzing similar types of samples in its normal operations. ELPAT samples should be rotated among all analysts performing similar analyses in your laboratory.

What happens after the reults are mailed?

Your results will be evaluated using statistical procedures established by NIOSH in cooperation with the Environmental Lead Laboratory Accreditation Committee (ELLAC). You will receive details of the statistical protocol used and examples of output when you enroll in the ELPAT Program.

What are the criteria used for rating my performance?

Performance ratings are based on accumulated results over four rounds (one year). The acceptable range is based on consensus values from reference laboratories. A laboratory's performance for each matrix is rated as proficient if either of the following criteria are met:

(1) In the last two rounds, all samples are analyzed and the results are 100% acceptable; or (2) Three fourths (75%) or more of the accumulated results over four rounds are acceptable.

Test Samples

AIHA offers samples from previous rounds for laboratories wishing to evaluate analytical procedures and quality control systems. Certificate of analysis is provided with the samples to permit evaluation of how well the laboratory performed. Kits consist of four concentration levels for each matrix, which include paint chips, soil, and dust wipes. Dust wipe samples include a blank. Wipe media used in the ELPAT program are available from LG Best & Associates, Inc. (919) 467-0466.

To review the requirements for accreditation or download the application for accreditation, click here Laboratory Quality Assurance Program Application.

For more information on the ELPAT Program, contact the Laboratory Accreditation Department at AIHA; (703) 849-8888
